

APPLICATION OUTSOURCING SERVICES

Support strategic business imperatives with application services

Companies rely on business applications for everything from managing day-to-day processes to supporting innovation and growth. Yet, not every firm can devote the resources required to develop, manage, and maintain these vital assets. Stefanini TechTeam delivers technical expertise along with consistent business processes and methodologies to ensure that your company has the solutions you need to support your business objectives.

Our team collaborates with your key stakeholders to define the solutions you need given your budget and timeline. Whether your solution requires a major development project or enhancements and upgrades, our team delivers.

Leverage our investments in tools, technologies and training to gain high-end solutions at competitive prices. Our global team can tailor a solution from onshore, nearshore or offshore resources, and blend onsite management with remote delivery. We've worked with companies of all sizes, in multiple geographies and in numerous industries – we can build the applications you need.

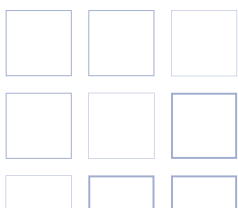

OUR SUPPORT SERVICES

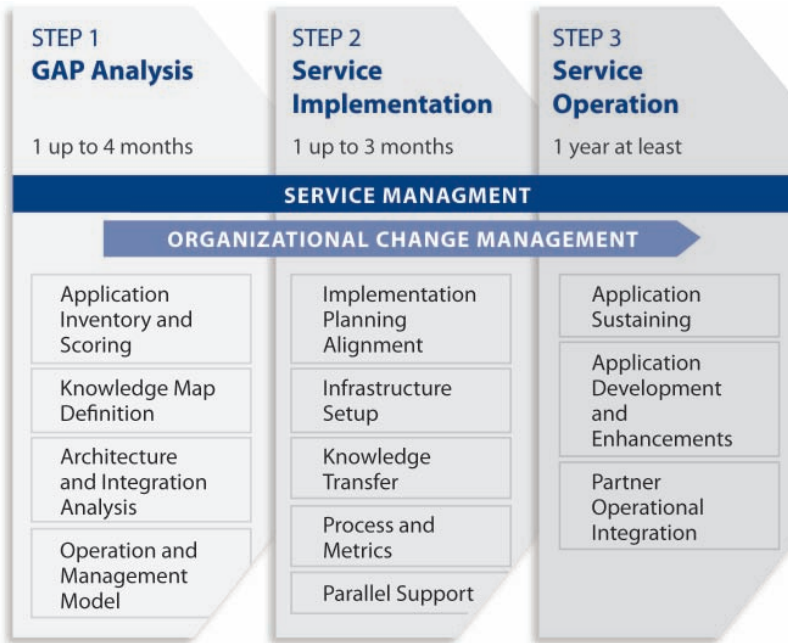

- Application Development
- Application Enhancements and Upgrades
- Application Management and Maintenance
- Legacy System Support, Modernization and Migration

YOUR BUSINESS NEEDS

- Applications that support business objectives
- Cost-effective solutions using on-shore, near-shore, and offshore resources
- Responsive professionals that deliver on-time, in-budget
- Technical expertise in operating systems, languages, and databases
- Consistent, high-quality processes and procedures

Service Implementation Approach

OUR SOLUTION

Stefanini TechTeam Application Outsourcing Services provide high-end solutions at the most competitive prices by leveraging a global delivery and support team.

Application Development and Management – Your Way

We take pride in the agility of our processes, which allow us to adapt to our customers – rather than forcing our customers to conform to our development processes. We partner with you to determine the business outcomes you require, and develop new applications, features, extensions, enhancements, interfaces, and upgrades to support existing and emerging business functions.

We will work with you to define the level of development and management that you need. Whether you prefer to have Stefanini TechTeam gather the requirements up front and then give you the freedom to have another vendor do the development, or you want your current vendor to build the application and have us test it—we are flexible and responsive enough to meet your needs regardless of the level of involvement you are seeking and the application development stages that we will own.

Legacy System Support, Migration and Modernization

Our legacy solutions enable your organization to maximize its investment in systems, platforms and applications. We develop the solutions required to modernize your infrastructure, and help you migrate to advanced technologies. Not ready to migrate from your mainframe-based applications? We also offer mainframe application development and support from an experienced team of professionals

Application Maintenance, Enhancement and Upgrades

Stefanini TechTeam performs system maintenance as well as system improvements in technologies from mainframe platforms to Web- and PC-based applications, including the development of both hosted and distributed applications.

Application Consulting Services

We combine our strengths in technology with our consulting experience and industry knowledge to help your company develop an edge over your rivals through deployment of SAP best practices and best of breed developments. We can perform onshore in the US while at the same time the core application can be under development nearshore in Brazil and Latin America with clear and timely response and scalability.

FEATURES

Our experienced professionals are versed in every major operating system, transaction processing system, database and programming language. When others “can’t”, Stefanini TechTeam can. We also support mainframe and legacy applications.
